- Reliable
- Compact form
- Maintenance free
- · Use of non corrosive materials
- · Easy disassembling and inspection

PRV Pressure Relieve Valve

The DMN-WESTINGHOUSE over-and-underpressure relief valve PRV is an indispensable component for guaranteeing atmospheric pressure in receiving and discharging vessels.

The PRV is designed to avoid an explosion or implosion which can occur when an unacceptable level of pressure or vacuum arrises inside the hopper or silo. In such a situation the PRV will automatically open and restore atmospheric conditions inside the silo or hopper. As soon as the atmospheric condition is achieved, the valve will close and re-establish sealing.

Technical characteristics	
Design pressure:	+100 / -50 mbar
Maximum operating pressure:	+45 / -20 mbar
Design temperature:	-20 / +200 °C
Maximum operating temperature:	-10 / +150 °C
(Template) flanges:	DN 250 PN 16 (4 holes)
Minimum calibration pressure:	+8 / -5 mbar

Product information

Constructed for outdoor conditions the PRV consists of a cast aluminium body containing a cast aluminium overpressure and underpressure disc. The calibrated stainless steel springs ensure that under normal conditions the gaskets are sufficiently compressed for effective sealing. The whole unit is protected by a stainless steel cover.

The standard execution is suitable for 39,6 millibar overpressure and 19,8 millibar underpressure. Other specifications are available on request.

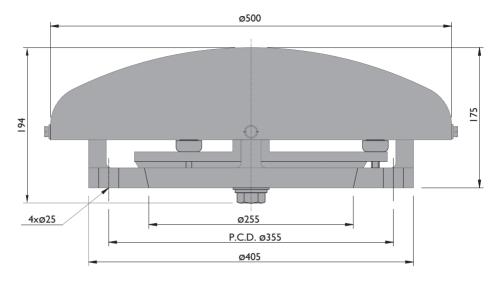

DMN-WESTINGHOUSE

have been designing and manufacturing rotary

valves, diverter valves and other related components

for the bulk solids handling industry for more than 30 years.

Offering tailor made

solutions for chemical, food, plastics and

pharmaceutical industries,

DMN-WESTINGHOUSE

products are distributed

Besides an extensive range of standard

components, we supply USDA approved sanitary versions and explosionproof models. An extensive network of

subsidiaries, distributors

ensures a high level of

service and support all

over the world.

and representatives

worldwide.
